

FLEXIBLE BAG FOR USE IN DISPENSING A FLUENT MATERIAL

ABSTRACT OF THE DISCLOSURE

A flexible bag of the present invention is for use in dispensing a fluent material. The bag is formed of flexible material and shaped for substantially enclosing a volume for containing the fluent material. The bag comprises a body and plural nipples, each nipple being integral with the body, projecting outwardly from the body, and having an open outer end. The body and nipples are in fluid communication for movement of the fluent material from the body to the nipples. Plugs including a plug for each of the nipples resealably close the open ends of the nipples.
